

# KIDNEY-FRIENDLY FOOD FOR CHRONIC KIDNEY DISEASE

New in the  
**US**

- Low Protein
- Energy source
- Low in salt
- Low in phosphorus and potassium
- Source of fiber
- Excellent taste and texture

## HOW CAN KIDNEY FRIENDLY MEDICAL FOODS HELP?

- These foods are a good source of energy and fiber whilst providing only minimum amounts of protein, phosphorus, salt/sodium and potassium.
- They play an important role in preventing protein-energy wasting (malnutrition) and facilitate the intake of protein of high biological value.
- Finally they increase CKD suitable food choices which may result in increased patients adherence.
